

Gone are the days when everyone gathered on the front porch and shared in the life of their community. But the needs of children for a safe and nurturing place to grow-up have not changed. The Front Porch Project® brings individuals and communities together to increase awareness about child safety issues, acquire valuable intervention skills, and increase comfort and willingness to intercede on behalf of a child. There are two full days of training, scheduled approximately four weeks apart. The time frame between training days is necessary for participants to encounter opportunities to practice their new intervention skills.
