

Good morning Homeowners:

Water leaks can cause a very expensive problem. Undetected water leaking under your sink, dishwasher, toilet or washing machine may cause warped, damaged floors and mold and mildew problems. Three years ago I found the Zircon Leak Alert Electronic Water Detector on Amazon, purchased six and placed them in the appropriate locations. Since then I've been alerted of a leak under a sink twice which has allowed me to catch the leak quickly saving me a costly repair. The product that I bought was the Zircon Leak Alert. It is reusable, requires a battery and emits a loud alarm when any water touches the alert area. I've not had to replace the battery in any of the units so far.

In case you may be interested in purchasing this protection, the alarms are listed below. I don't know anything about the Honeywell Water Alarm but their brand is well known.

Sorry if I sound like a salesperson. (No, I don't get a kick-back from the company)

Carol

Amazon (on-line only)	Home Depot (on-line only)
