

Keystone Owners Association Approved Plants List - Updated June, 2016

(NOTE: The board, with guidance from a professional landscape consultant, has updated the former list of approved trees and plants—issued in May of 2001— to accommodate space limitations, esthetics, and the most efficient use of natural resources. Removed from the old list were the following trees: Brazilian pepper, Chilean mesquite, Indian rosewood, Mimosa, Orchid tree, and Shamel ash. They were omitted because, when mature, they may interfere with pavement, plumbing, and other plant life. This list is to be viewed as a guideline for homeowners as it relates to their front yards only; it is not intended to limit plantings in back yards, where more space may accommodate larger trees).
